Project description:

gec-co Global Engineering & Consulting-Company GmbH is responsible for the technical management since 2016. gec-co is particularly active in the fields to increase availability and efficiency and the constant optimization of operation.

The experienced gec-co staff was already involved as a general planner for conceptual design phase including preliminary planning, tendering and contracting, support in approval procedures as well as supervision on construction and commissioning of the geothermal power plant. The parallel district heating system was successfully connected to the network in 2014. The power plant with a high efficiency started operations at the beginning of 2016.

gec-co accompanied already since 2010 as general planner the establishment of the geothermal heating plant. Due to very good market knowledge, flexibility and forward-looking planning of gec-co employees, the supply of electricity and heat could be carried out as planned.
